Beating Peripheral Neuropathy

New protocol dramatically reduces pain, burning and tingling, fosters your own independence too...

Managing peripheral neuropathy in private practice

can be one of the most frustrating clinical experiences for Primary Care Physicians and Neurologists alike.

Until now, most treatments have focused only on symptom control, largely by way of drugs, and blood sugar control in diabetic patients. Physical Therapy alone often provides little if any lasting relief. As you know, drug costs and patient compliance, as well as medication side effects have left us all wishing there were more as doctors that we could do for our patients.

Well, now there is! Using a combined program of patient care which includes nutrition and diet education, exercise and rehab therapies. Plus, we use clinically tested 7.8Hz electrotherapy. With additional massage techniques and spinal manual therapies where indicated, patients can achieve not only lasting relief, but long term self management.

Most patients can then be transitioned to home care with a successful clinical trial.

Whats different about this program?

Wether due to diabetes, chemotherapy or other disorders, neuropathy symptoms share common causes. Nerve tissues are highly vulnerable to damage from diseases that impair the body's ability to transform nutrients into energy, process biochemical waste products, circulate oxygen, or manufacture some components of cellular repair.

Diabetes mellitus is a major cause of peripheral neuropathy in the United States. About 60 percent to 70 percent of people with diabetes have mild to severe forms of neuropathy.

Chemotherapy is another leading cause in our age advancing populations of patients in most communities.

Combined Electro Stimulation at 7.83 Hz: A pain-free electrical dual frequency signal (one to stimulate the nerve cells and the other to trigger muscle cells) is pulsed on and off at the frequency of 7.83 cycles per second. *We have found that the human body is particularly sensitive to this frequency. One postulation for this sensitivity is that the electrical potential between the earth's atmosphere and the earth's surface is also approximately 7.83 Hz. Using this signal frequency, *research has found that the body not only responds favorably but the brain is induced to release large amounts of endorphins. The effect of this endorphin release is a generalized sense of well-being, a reduction in pain and anxiety levels elsewhere in the body, and

even a reduction in emotional pain. Long term clinical applications suggest some normalization of function is occurring*. This ensures a very high level of patient compliance not only because you feel good physically during the treatment period but because you feel better emotionally afterward experiencing a reduction in pain for a period of 4 to 6 hours.

What about My Alignment and Exercise? In most patients, the lumbar and hip (piriformis) areas experience muscle spasms, blood flow is restricted through muscles resulting in reduced oxygen availability to the surrounding tissue, including nerve cells. Because muscles can use either oxygen or glucose metabolic pathways, they can recover quickly from a temporary reduction in circulation. Nerve cells, on the other hand, are limited to a different system and must take immediate defensive steps to survive. Our program provides the right combination of manual therapies and home exercise and self-care programs to effect lasting changes in circulation and maximum treatment independence.

The Bottom Line:

After 1-2 months of care, you are discharged to a home care program

A *ReBuilder(r) home unit neurostimulator may be purchased if after 1-2 months of supervised in-office treatments, documented progress meets the standard of medical necessity. Any appropriate nutritional supplements are auto-shipped to you each month. We use only High Quality professional and research supported nutrition products. We are always available for follow up exercise and physical modalities, and refer each patient back to your MD for careful monitoring of your medical conditions.

To find out more:

Call our office at 320-796-5180 and have our staff Schedule a Neuropathy Protocol Evaluation for you. I of course would be more than happy to personally consult with you on this exciting new program for a particularly challenging problem. I would be more than happy to share clinical support materials with your MD. *ReBuilder (R) Research is by David Phillips, PhD, also the inventor of the original tympanic (ear) thermometer.
